130 1805 over 1804, a break in the die covers the seventh star on the left, taking in nearly all of the sixth, the 4 is the plainest I have ever seen. This is evidently the die from which the bogus half dollar of 1804 was manufactured. This is a rare variety, good.

In referring to Mr. Haseltine's Catalogue, it will be seen that he catalogues it as over 1811 or 1821. I believe after a second examination with a strong glass that it is over 1821, it cannot be over 1811, as a second 2 is plainly seen under the one of the date. A collection of 1794 Cents, embracing some of the rarest varieties, and some very fine and desirable pieces. The 1794 Cents are getting rare, which is easily accounted for, from the fact that it now takes forty or fifty pieces for each collector, when formerly one or two specimens were sufficient. The 94's are the handsomest cents ever coined by the U. S. Mint, and we are not surprised to see them going up in price all the while. They are numbered according to Dr. Maris' work.
